Optimization Now Certified to Repair Pressure Retaining Items

ROCHESTER, NY – The National Board of Boiler and Pressure Vessel Inspectors has given Optimization its “R” Certificate of Authorization. The certification allows Optimization to perform welding repairs and alterations to metallic pressure retaining items both in its shop and out in the field, an uncommon capability for industrial welding service suppliers in Rochester.

In order to obtain “R” accreditation, an organization must meet specific quality system, inspection and documentation requirements. Then a board-certified review team must observe the company’s work to show evidence of welding knowledge, post weld heat treatment, nondestructive examination and other repair activities. Upon approval, the company is issued an “R” symbol stamp and certificate, valid for three years.

“Our ability to offer “R” Stamp certified services is another example of Optimization’s commitment to provide superior services to our customers,” says LeRoy Quick, Quality Manager at Optimization. “We look forward to the opportunity to display our craftsmanship and quality processes in the execution of this important segment of work.”

Optimization Technology, Inc., a global design, engineering and fabrication company headquartered in Rochester, New York, provides industrial and manufacturing applications from concept to completion solutions. Optimization has several locations in the U.S., including Rochester, Houston, Syracuse, Boston and Philadelphia, as well as Canadian operations based in Alberta.
